Structural Uncertainty Evaluation - Parameters and Configuration

Input & Realizations

- Surface: Imported Time + Depth
- Number of realizations: 50
- Velocity Std. Dev. (ft/s): 250.0
- Smoothing sigma: 2.0
- Section/Cut angle (degree): 0
- Torch acceleration enabled: True
- Contour step (spill search, ft): 20

Variogram

- Model type: Gaussian
- Range (m): 3535.5339059327375
- Sill: 1.0
- Nugget: 0.1

Volumetrics

- Thickness mean (m): 102
- Thickness std. dev. (m): 37
- N/G: 0.8
- Porosity: 0.2
- Water saturation (Sw): 0.3
- FVF: 1.2

Wells & Conditioning

- Wells count: 0
- Wells used as anchors: True
- Show wells on maps: True

QC Additions

- Covariance matrix among wells exported to Excel
- Well metadata and nearest-grid diagnostics exported to Excel

Structural Uncertainty Evaluation - Covariance QC

Covariance Diagnostics

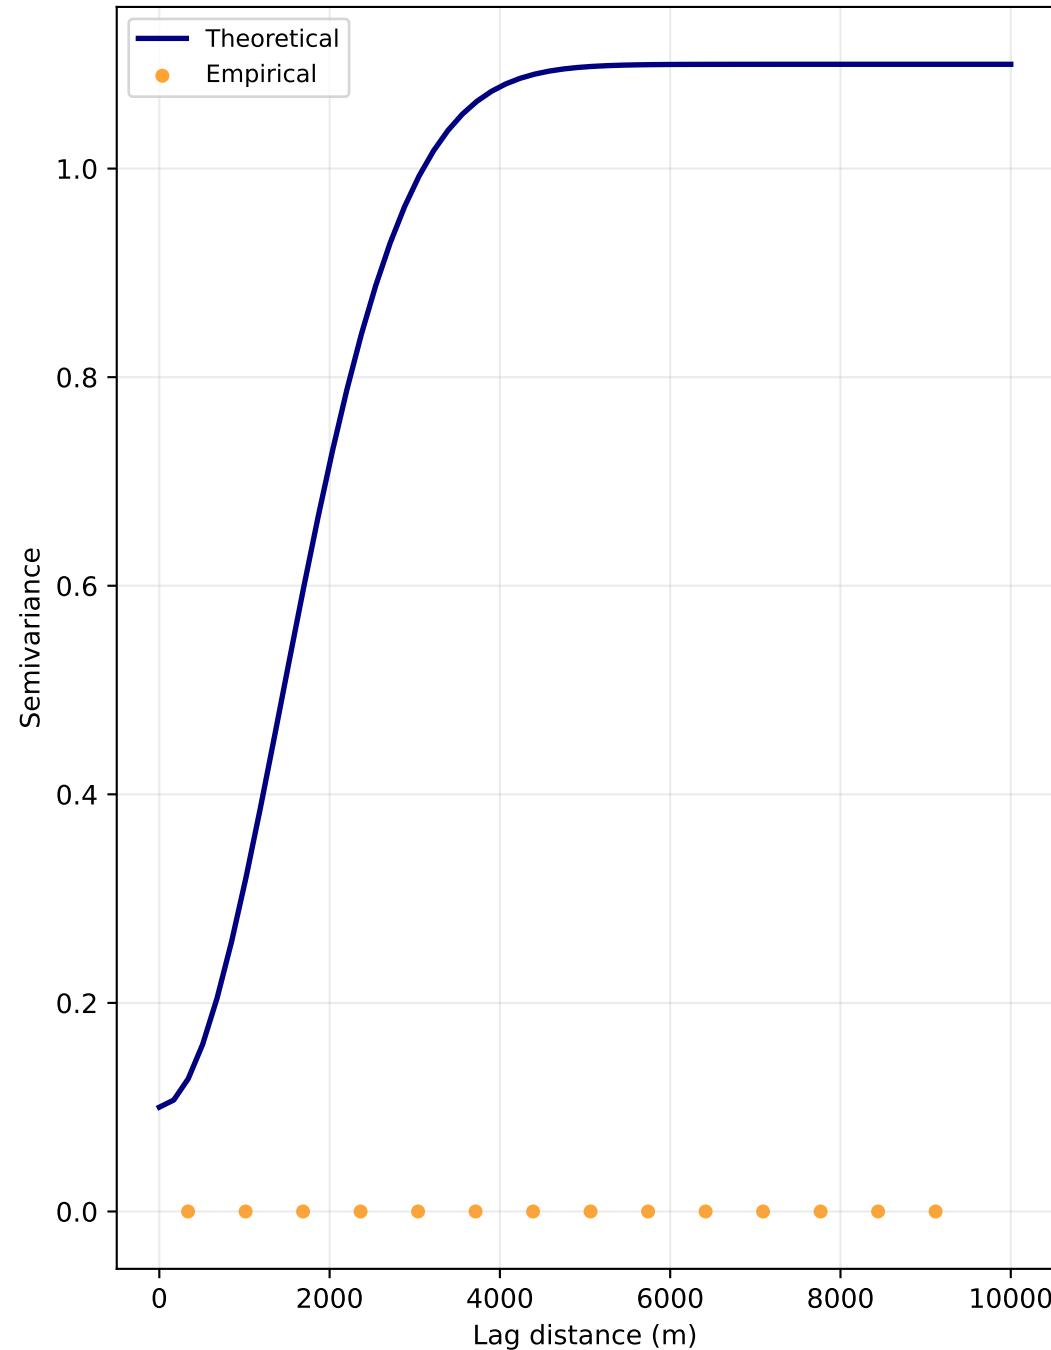

- CovarianceConditionNumber: nan
- CovarianceMinEigen: nan
- CovarianceMaxEigen: nan
- CovarianceOffDiagonalMean: nan
- CovarianceOffDiagonalStd: nan

No wells covariance available

Structural Uncertainty Evaluation - Variogram QC

Empirical vs Theoretical Variogram

Parameter Recommendations

- Range_m: current=3536, recommended=3536
reason: 25% of map diagonal is a robust default correlation distance
- Sill: current=1, recommended=0.1
reason: Tail median of empirical semivariogram stabilizes sill estimate
- Nugget: current=0.1, recommended=0.1
reason: Default engineering-safe microscale noise floor

Structural Uncertainty Evaluation - Engineering Coherence QC

Metric	Value	QC_Note
FiniteVelocityCoverage_pct	100.0	Target >= 99%
FiniteDepthCoverage_pct	100.0	Target >= 99%
VelocityMin_mps	2675.388184	>= 1200 m/s safeguard
VelocityMax_mps	3469.5	Check for realistic AV
FinalDepthMin_m	-2847.662598	Interpretation specific
FinalDepthMax_m	-2408.562012	Interpretation specific
ClosurePresenceFrequency_pct	100.0	Avoid 0% unless open structure
